EDUCATION

BITS Pilani — B.S. Computer Science

Aug 2024 – Present | CGPA: 8.95

WORK EXPERIENCE

CodexNovas : React.js Developer Intern

2025 | Website

- Developed a **production-grade B2B SaaS platform** using **React.js**, **Tailwind CSS**, and **Firebase Authentication**, contributing to scalable workflows used by businesses and teams.
- Designed and implemented **modern responsive UI screens in Figma** and transformed them into high-performance frontend interfaces with smooth animations and interactive user experiences.
- Built **reusable frontend components and modular architectures**, improving maintainability and accelerating feature development by nearly **35%**.
- Optimized **frontend rendering, responsiveness, and loading performance**, enhancing usability across desktop, tablet, and mobile devices.
- Implemented **secure authentication flows, protected routes, and state-driven UI interactions**, improving overall user engagement and onboarding experience.
- Integrated APIs and Firebase services to enable **real-time data handling and dynamic dashboard experiences** for end users.
- Contributed to frontend systems supporting **enterprise-scale SaaS operations**, focusing on scalability, clean UI architecture, and smooth cross-browser experiences.

Drone Lab Project : Air-Avaat (Fire-Fighting Drone)

Aug 2024 – Dec 2024

- Built **real-time computer vision models** using Python and OpenCV to detect fire and smoke with high accuracy in dynamic environments.
- Integrated **multi-sensor systems : temperature, gas, infrared** enabling autonomous navigation in hazardous zones.
- Designed **control algorithms** reducing human intervention by **40%**, improving safety and operational efficiency.
- Processed sensor inputs and implemented decision logic to enable **real-time hazard detection and response**.
- Collaborated with hardware teams to achieve seamless **software-hardware synchronization** across motors, sensors, and controllers.
- Tested and validated system performance in simulated environments, improving **reliability and detection accuracy**.
- Delivered a **functional prototype** capable of reducing emergency response time through automated detection and navigation.

Open Source Contributor : GSSOC'25 & Hacktoberfest

2025

- Contributed to **production-level open-source projects** including **ResQApp**, **Weather-API**, and **Music-Recommendation-Using-Facial-Expressions** under GSSOC'25.
- Built a **Gradio-based frontend UI** for emotion-based music recommendation with webcam/image uploads and interactive playlist workflows.
- Enhanced **Weather-API UX** by implementing emoji-based weather condition mapping and improving visual feedback systems.
- Collaborated using **GitHub workflows : pull requests, issue discussions, code reviews, and scalable feature development**.
- Contributed to **real-world frontend and full-stack ecosystems** using Python, JavaScript, React, and UI-focused optimizations.

PROJECTS

1. Brain Tumor Detection using YOLOv8

GitHub

 - Built an AI-powered MRI brain tumor detection system using YOLOv8 with preprocessing, augmentation, and tumor localization.
 - Evaluated model performance using Precision, Recall, and F1-Score for medical image analysis.
2. KawaiiLM : AI Document Chat Platform

GitHub | Live

 - Developed a full-stack RAG-based AI assistant with semantic search and contextual document conversations.
 - Integrated Qdrant, LangChain, Hugging Face APIs, and SSE streaming with citation-based document retrieval.
3. ShopVerse : MERN E-Commerce Platform

GitHub | Live

 - Built a scalable MERN e-commerce platform with JWT authentication, Stripe payments, and Cloudinary integration.
 - Implemented Redux state management, Socket.IO real-time updates, and responsive shopping workflows.
4. HAMS : Hospital Appointment Management Backend System

GitHub

 - Developed a Spring Boot backend system with JWT authentication and role-based appointment management APIs.
 - Integrated PostgreSQL, Redis caching, Kafka messaging, Swagger documentation, and email notification services.
5. Personafy : Persona-Based AI Chatbot

GitHub | Live

 - Created a persona-driven AI chatbot using advanced prompt engineering, few-shot prompting, and CoT reasoning.
 - Built a Neo-Brutalist Next.js frontend with dynamic persona switching and Gemini-powered conversations.

SKILLS

Tech Languages Java, C++, Python, JavaScript	Tools/Frameworks React.js, Node.js, Express.js, Tailwind CSS, Bootstrap
Language Proficiency Hindi, English, Spanish	Libraries NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn
Version Control & Tools: Git, GitHub, Firebase, Postman, VS Code, Google Colab, Render	

ACHIEVEMENTS

CP TRACKER	ACCOMPLISHMENTS
★ LeetCode: 1524	★ Meta PyTorch OpenEnv Hackathon Finalist: Top 800 out of 31,000+ teams.
★ CodeChef: 1496 (2*)	★ SheFi Scholar (Season 15): Selected for Web3 and DeFi training program.
★ Codeforces: 1050	★ Google Student Ambassador: Recognized for leadership and community impact.
★ AtCoder: 185	

LEADERSHIP

- Core Member @E-Cell SST:** Organized and contributed to entrepreneurship initiatives, driving engagement across the student community.
- Core Team @Drone Club SST:** Led technical collaboration on drone-based innovation projects and competitions.
- Ex-Core @Food Committee SST:** Managed logistics and operations for large-scale campus events.
- Deputy Head Girl @Radiant International School:** Led student body initiatives, coordinated events, and represented student leadership.

CERTIFICATIONS

- Postman Student API Fundamentals Expert
